

Mill Test Reports

Mill Test Reports (MTRs) refer to serialized tests, inspections and attribute information recorded on steel, heat-treated, pressure-retaining transmission products monitored by the Pipeline and Hazardous Materials Safety Administration (PHMSA).

Border States is dedicated to helping you complete your supply chain compliance requirements and has a mission to facilitate a safe, ethical and legal supply chain. We collaborate with you and our suppliers to minimize risk, support compliance and maintain responsiveness to state, federal and international regulations.

Border States and federal regulations require MTR information to be provided by vendors and retained by all parties — including Border States, suppliers and customers — through the pipeline's life, including manufacturing, supply chain and installation. We request all standard documentation from the manufacturers at the time of our purchase. Custom materials or documentation may be made available upon request as a special-order purchase.

How to find MTR information

You can find MTR information on your packing slip, through our online MTR portal at borderstates.com/mtr or by emailing customeratr@borderstates.com.

To learn more about MTR requirements, visit the PHMSA page on the United States Department of Transportation website at phmsa.dot.gov/ or reference **49 CFR § 192** in the Code of Federal Regulations.

Key takeaways

It's important to us that we support you in complying with MTR requirements. As you navigate MTR requirements, know that you can rely on Border States to help you minimize your risk, support compliance and maintain responsiveness to state, federal and international regulations.

Questions?

If you have questions about Border States' compliance with MTR regulations, please contact customeratr@borderstates.com. For all other inquiries, please contact your Border States Account Manager.
